Software Engineer with 5+ years of experience building performance-critical C++/C# systems, backend services, real-time applications, and automated validation tooling. Led a four-person engineering team, shipped software across PC and current-generation consoles, and delivered CI/CD workflows for multiple hardware targets. Experienced in concurrent and networked systems, cloud deployment, production AI integrations, profiling, and international cross-functional collaboration.

SKILLS

Languages:	C++, C#, Python, TypeScript, SQL
Systems & Backend:	.NET 9, ASP.NET Core, Entity Framework Core, REST APIs, TCP/UDP, concurrent and async programming
Cloud & Data:	AWS, PostgreSQL, SQLite, DynamoDB, Firebase/Firestore, Docker, Oracle Cloud, Render, Vercel
DevOps & Quality:	GitHub Actions CI/CD, Git, Linux, xUnit/NUnit, profiling, code review, Swagger/OpenAPI
Real-Time Systems:	Unreal Engine 5, Unity, network replication, computer vision, CPU/GPU and memory optimization

WORK EXPERIENCE

Software Engineer (C# / AI Integration), Cafundó Creative Studio (Contract)

Jun 2025 — Present

- Architected an AI-powered C#/Unity application for high-traffic public spaces, serving 500+ daily interactions with zero downtime.
- Integrated OpenAI and Azure Cognitive Services with resilient authentication, rate-limit, and failure handling, reducing voice-to-response latency by 30%.

Software Engineer / Team Lead (C++/Python), Ford Motor Company

Jan 2023 — Present

- Led a team of four building high-performance C++/Python tooling and real-time vehicle simulations across multiple hardware targets, processing 5M+ polygons at stable frame rates.
- Delivered a custom C++ hand-tracking plugin that exports a mesh snapshot and the user's hand-interaction volume without perceptible lag or frame drops.
- Built a real-time C++ occlusion detector for vehicle parts, reducing a legacy validation workflow from approximately two hours to seconds.
- Automated build, test, and deployment with GitHub Actions across 5+ platforms, with a focus on profiling, memory management, stability, and maintainability.

Software Engineer (C++ / Unreal Engine 5), Blue Gravity Studios (Contract)

Jan 2024 — Sep 2024

- Engineered C++ network-replication logic for multiplayer architecture supporting highly concurrent online sessions.
- Shipped SkateNation XL for PlayStation 5, Xbox Series X|S, and PC with a distributed, multidisciplinary international team.
- Improved core-system modularity, reducing bug-fixing overhead by 20%, and implemented a cross-platform keyboard and gamepad input system.
- Optimized draw calls and memory use with cross-functional partners, improving performance on constrained hardware.

Virtual Reality Researcher, Ford Motor Company

Aug 2021 — Dec 2022

- Spearheaded automotive VR R&D, establishing workflows later adopted as the company standard for virtual prototyping.
- Collaborated with Design and Engineering teams to translate physical requirements into testable virtual specifications.

PROJECTS (All project pages accessible from [Portfolio](#))

Resume Matcher — AI Job Search Platform | C# / .NET 9 / React / PostgreSQL | 2026

Full-stack platform aggregating remote jobs from 7+ boards and using Google Gemini to score resume-to-job compatibility.

- Built a .NET 9 API that queries seven providers concurrently, deduplicates results, and handles provider failures.
- Added match scores, keyword-gap analysis, and improvement suggestions through the Google Gemini API.
- Implemented ASP.NET Identity with JWT in HttpOnly cookies, user profiles, and persistent analysis history.
- Containerized the API and deployed it on Render with a Vercel frontend and PostgreSQL persistence.

PSN Price Tracker API & Bot | C# / .NET 9 / Docker | 2026

Built an asynchronous backend with IHostedService workers for continuous PlayStation Store monitoring and Telegram alerts.

- **Implemented SHA-256 API-key authentication, global rate limiting, and IMemoryCache to reduce redundant external calls.**
- **Added HTML parsing fallbacks and persisted sessions and alerts with Entity Framework Core and SQLite.**

- **Deployed with Docker on Oracle Cloud, reducing setup time from 2+ hours to under five minutes and supporting 24/7 operation.**

Crypto Tracker | React / TypeScript / Firebase | 2025

- Built a responsive React/TypeScript application using CoinGecko data, Firebase Authentication, and Firestore.
- Implemented above/below price alerts with dynamic USD, BRL, and EUR conversion.

Professional Measurement Tool | Commercial Fab Plugin | Unreal Engine C++ | 2026

Commercially published C++ editor plugin for point-to-point distances and enclosed areas, with real-time feedback and a custom Editor Mode.

- Implemented three snapping modes with six-axis traces and a Slate toolkit for precise placement and editing.

Runtime Skinned Mesh Exporter | Commercial Fab Plugin | Unreal Engine C++ | 2025

Commercially published C++/Blueprint plugin exporting skeletal and static meshes at runtime to OBJ, MTL, and PNG.

- Built a fully asynchronous GPU-to-CPU readback and thread-pool PNG-compression pipeline using FRHIGPUTextureReadback, avoiding perceptible hitches.
- Maintained UE 4.27–5.6 compatibility through version-conditional code.
